

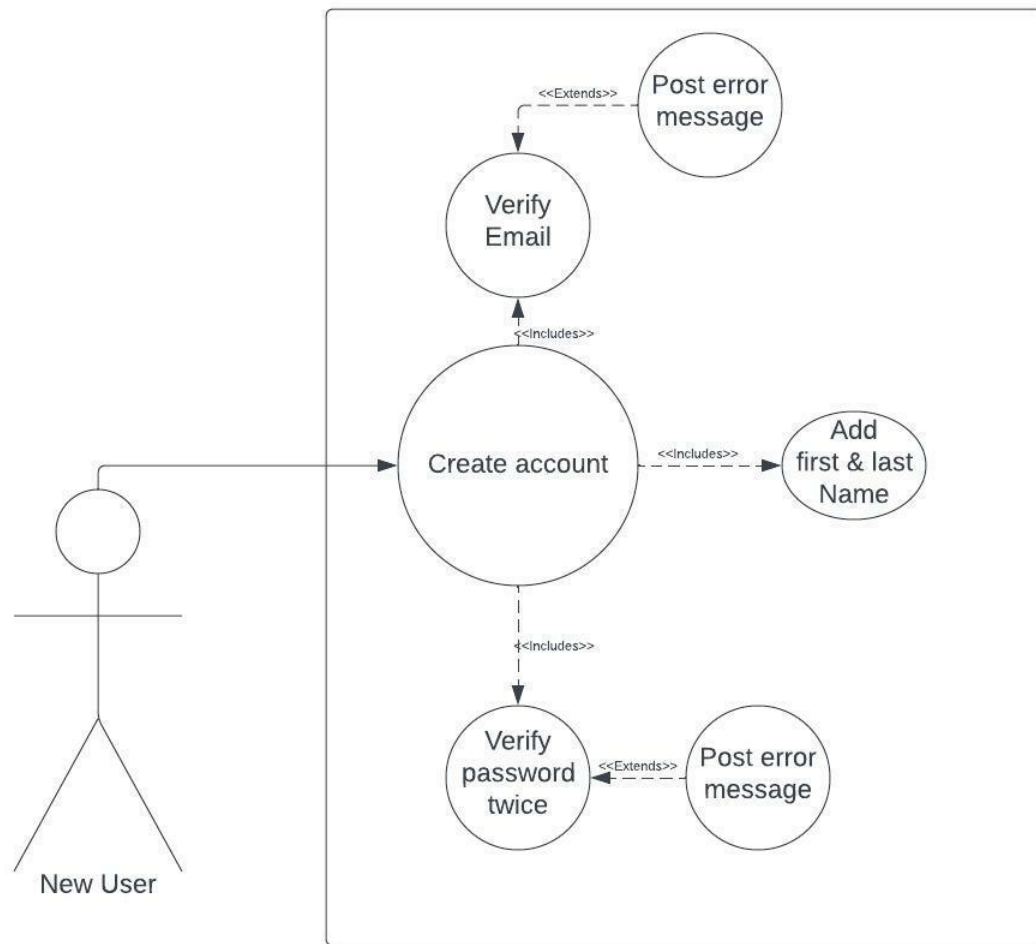

Figure 7: Create Account

Participating Actor: User (first time login)

Entry Conditions:

- User wants to create an account to visit the site

Exit Conditions:

- User successfully creates an account; relevant data is saved into the database
- User decides to not create an account and cancel

Event Flow:

1. User is prompted to enter a valid email.
2. User is prompted to add a first and last time to their account.
3. User is prompted to enter a unique password two times, the same password each time
4. Customer presses create account after having all their information entered.
5. Email and password are validated to be correct, user prompted to correct errors where present
6. Successful account creation, database is updated, and user is forwarded to login page
