

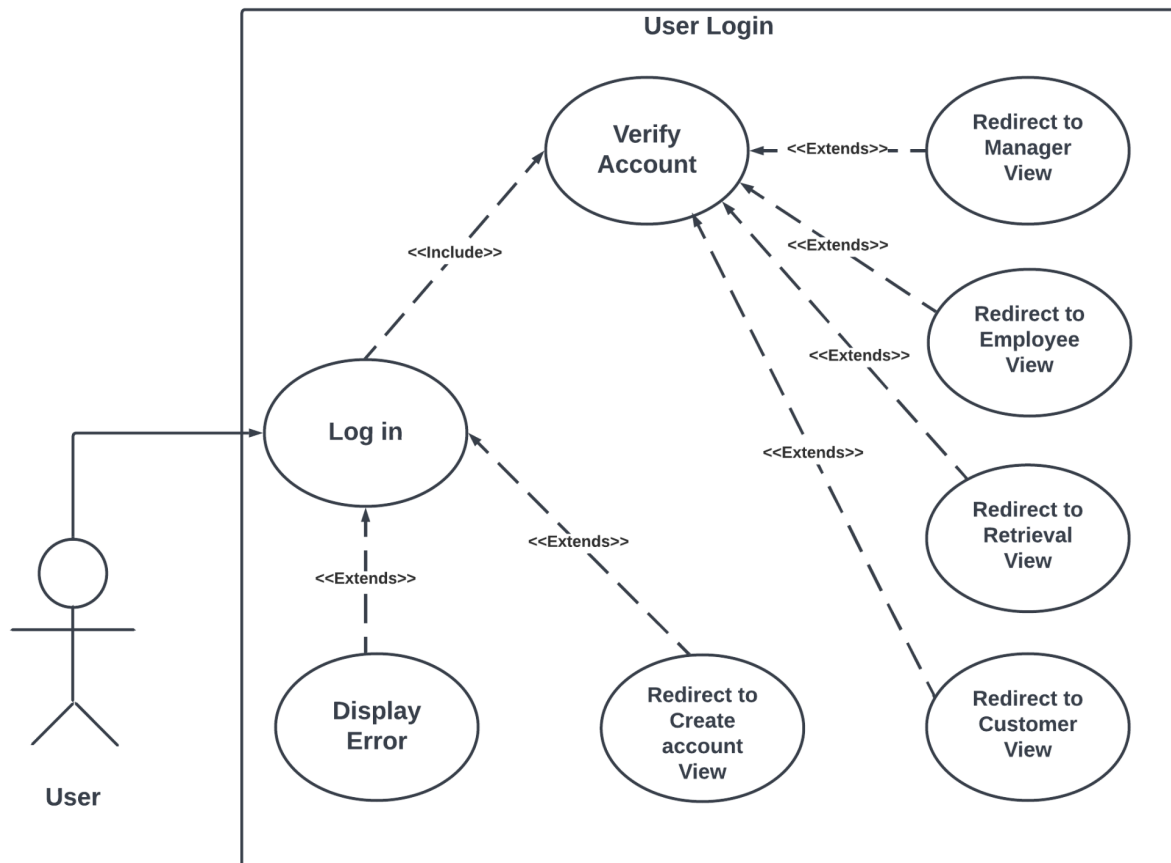

Figure 1: User login page

Participating actor: User (Customer, Manager, Retrieval specialist or General employee)

Entry Conditions:

- User wants to log into their account regardless of their access level.

Exit Conditions:

- Redirects to Manager view.
- Redirects to Employee view.
- Redirects to Retrieval view.
- Redirects to Customer view.
- Redirects to Create account view.

Event Flow:

1. User logs into the system.

2. If the user does not have an account, then they can create an account using the create account view.
3. Otherwise the user account is verified.
4. If the account is not valid then an error message is displayed
5. Otherwise, the user is redirected to their respective page. This is determined by their access level.
